Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Notice of the Office communication was sent electronically on above-indicated "Notification Date" to the following e-mail address(es):

mailroom@bskb.com

Office Action Summary

Application No.

10/733,383

Applicant(s)

AHN ET AL.

Examiner

ANDREW C. FLANDERS

Art Unit

2614

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 29 May 2009.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-3,5-10 and 12-14 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-3,5-10 and 12-14 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 12 December 2003 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some * c) ☐ None of:
1. ☒ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☐ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO/SB/08)
Paper No(s)/Mail Date _____
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date _____
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: _____

DETAILED ACTION

Response to Arguments

Applicant's arguments filed 29 May 2009 have been fully considered but they are not persuasive.

Applicant alleges:

Burges et al. in nowhere teaches the preset audio kinds. Further, Tanaka et al. fails to overcome these deficiencies of Burges et al.

Examiner respectfully disagrees. The device in Fig. 2A clearly teaches learning about audio files, specifically to allow classification/comparison. Burges discloses that the known data 235 of Fig. 2B is provided by the feature extraction module 230. This feature extraction module provides features so the device in 2B may compare and then discover what type/kind of audio it is; This is detailed in the system architecture section; specifically in col. 13 lines 10 – 28. Burges states explicitly "For example, with respect to an audio signal comprised of songs, the known data would represent one or more known songs that when passed through the DDA trained feature extraction module 230 will produce features which then correspond to the known data 235. In one embodiment, these extracted or "learned" features are then provided to an exemplary feature database 240 for subsequent use in any of a number of classification, retrieval, and identification tasks involving a signal input 250." Thus Fig 2A, the feature extraction module 230, at the end of the process creates "learned" features for comparison in signal analysis. Thus these learned features meet the "audio kinds."

Applicant further alleges:

However, Tanaka et al. in nowhere discloses detecting the listening audio mode., and also fails to disclose automatically switching a current listening audio mode to a listening audio mode with respect to the determined audio kind.

Examiner respectfully disagrees. In response to applicant's arguments against the references individually, one cannot show nonobviousness by attacking references individually where the rejections are based on combinations of references. See *In re Keller*, 642 F.2d 413, 208 USPQ 871 (CCPA 1981); *In re Merck & Co.*, 800 F.2d 1091, 231 USPQ 375 (Fed. Cir. 1986).

As shown previously, Tanaka clearly teaches in Fig. 4 an audio mode detector that functions to automatically switch the audio as necessary, i.e. automatically switching a current listening audio mode to a listening audio mode. Combining this with Burges in order for Burges device to perform the analysis thus meets the detecting the listening audio mode and also the switchign with respect to the determined audio kind.

Applicant further alleges:

In addition, the Office Action further states that switching an audio mode according to an analysis done on an input audio signal is well known in the art (see page 2 of the Office Action). Applicants respectfully request the Examiner to provide specific references if the features of the claims are well known in the art.

As shown in the prior rejection, Fig. 4 of Tanaka clearly teaches switching the audio mode based on an anaylsis.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to

consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1 – 3, 5 – 10, 12 – 14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Burges (U.S. Patent 7,082,394) in view of Tanaka (U.S. Patent 6,148,136).

Regarding **Claim 1**, Burges discloses:

An apparatus in a digital TV (abstract, and col. 12 lines 40 – 45), the apparatus comprising:

a preprocessing part configured to collect sample audio data, to extract features from the collected sample audio data and to classify the extracted features according to preset audio kinds (modules of Fig. 2A);

an audio mode determining part configured to determine an audio kind of a listening audio by pattern-matching a feature of the listening audio with the classified features (modules of Fig. 2B).

Burges does not disclose automatically switching an audio mode in the digital TV or switching to automatically switch a current listening audio mode to a listening audio mode with respect to the determined audio kind.

However, switching an audio mode according to an analysis done on an input audio signal is notoriously well known in the art. For example Tanaka discloses a

reproducing device that detects an audio mode and sets a television accordingly (Fig. 4). It would have been obvious to apply the analyzation technique taught by Burges to the audio mode detecting/setting device of Tanaka. One of ordinary skill in the art would have known to apply a known technique (the analyzation of Burges; which can be applied to any number of classification or identification tasks col. 13 lines 1 - 8; for example identifying an audio mode) to a known device (reproduction and audio switching system of Tanaka) ready for improvement to yield predictable results (i.e. Tanaka would now have another level of analyzation of the audio input signals in order to more accurately reproduce the audio).

Regarding **Claim 2**, in addition to the elements stated above regarding claim 1, the combination further discloses:

wherein the preprocessing part (Fig. 2A) comprises:

a sample audio database configured to collect and to store the sample audio data in the sample audio database (Module 240; feature extraction module 230 will produce features which then correspond to the known data 235, these extracted or "learned" features are then provided to an exemplary feature data base 240 for subsequent use in any number of classification retrieval, and identification tasks involving a signal input; col. 12 lines 59 – 67 and col. 13 lines 1 – 8) ;

a first feature extracting part configured to extract the features of the sample audio data stored in the sample audio database (Fig. 2A; 230); and

an audio kinds sorting part configured to classify the extracted features according to the preset audio kinds (te portions of the device that provide the extracted/learned features to the exemplary feature data base 240 after the features are determined by 230).

Regarding **Claim 3**, in addition to the elements stated above regarding claim 2, the combination further discloses:

wherein the first feature extracting part extracts the features from the sample audio data by using any one selected from the group consisting of ICA (Independent Component Analysis), PCA (Principle Component Analysis), clustering, and vector quantization (oriented principle component analysis; lower portion of column 12).

Regarding **Claim 5**, in addition to the elements stated above regarding claim 1, the combination further discloses:

wherein the audio mode determining part (Fig. 2B) comprises:

a second feature extracting part configured to extract the feature from the listening audio if the listening audio is inputted (230, which is considered to be a 'second feature extracting part' as now it has been reconfigured into the determination portion as shown in 2B which differs from the device in 2A);

a pattern matching part configured to pattern-match the feature of the listening audio with the classified features and out-putting a result of the pattern-matching (Fig. 2B 260);

an audio sorting determining part for determining an audio kind of which a feature is the most similar to the feature of the listening audio based on the result of the pattern-matching. The features claimed in this part are equivalent to the functions performed by element 260 of Fig. 2B, however they are part of the same module. However, separation of parts has been held to be an obvious modification; see MPEP 2144.04 V).

The combination further discloses:

an audio mode switching part configured to switch the current listening audio mode to the listening audio mode with respect to the determined audio kind (the results are provided to a user or other application for further processing; col. 13 lines 25 - 28; in the combination they are provided to the mode determining portion of Tanaka for setting the audio mode accordingly as shown in claim 1).

Regarding **Claim 6**, in addition to the elements stated above regarding claim 5, the combination further discloses:

wherein the first feature extracting part extracts the features from the sample audio data by using any one selected from the group consisting of ICA (Independent Component Analysis), PCA (Principle Component Analysis), clustering, and vector quantization (oriented principle component analysis; lower portion of column 12).

Regarding **Claim 7**, in addition to the elements stated above regarding claim 5, the combination further discloses:

wherein the pattern-matching part pattern-matches the feature of the listening audio with the classified features by using any one selected from the group consisting of dynamic programming, HMM (Hidden Markov Model) method, and neural network method (feature extractor is a convolutional neural network employing layered OPCA; col. 16 lines 40 - 55).

Claims 8 – 10 and 12 – 14 are rejected under the same grounds as the claims above.

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to ANDREW C. FLANDERS whose telephone number is (571)272-7516. The examiner can normally be reached on M-F 8:30 - 5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Curtis Kuntz can be reached on (571) 272-7499. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
